

## Creating a Food Blog for NDTV

Create the following web page using HTML and CSS. You need to create 5 files for it. Home, list and social\_network, contact us and application pages. You can also add any two pages of your choice.

Create a home.html file in which you divide your page into two sections using frames. Create another file named list which will display the menu in the left frame of the homepage.

Create following social\_network.html file which will appear in the right frame of the webpage.

When you click on should you join link on the right frame a following application.html form should open which is formatted using CSS.
